Introduction

- mHealth
 - special issue of IEEE Transactions on Information Technology in Biomedicine, Dec. 2004, *M-Health: Beyond Seamless Mobility and Global Wireless Health-Care Connectivity*
 - Mobile computing
 - Sensor technology
 - Communication technologies
- WBAN - emerging integration technology
 - Promising technology for unsupervised, continuous, ambulatory health monitoring
 - Challenge: design WBAN for extended real-time monitoring of physiological data and events.

WBAN: Motivation

- Goal: ubiquitous and affordable healthcare
- Conditions: demographic and technology trends
 - Informal caregivers (1/3 in the U.S.)
- Solution: 3-tier ubiquitous monitoring system
 - Tier 1: Wireless Body Area Network (WBAN)
 - Tier 2: Personal Server
 - Tier 3: Healthcare Provider Servers/Medical Servers
- Opportunities:
 - Ambulatory health monitoring
 - Computer-assisted rehabilitation
 - Augmented reality systems
- Long-term benefits:
 - Promote healthy lifestyle
 - Seamless integration of data into personal medical records and research databases
 - Knowledge discovery through data mining

RMIT Sep. 2005, Melbourne, Australia

UAH 3

WBAN - design goals

- minimization of weight and size of sensors,
- user's acceptance,
- portability,
- unobtrusiveness,
- ubiquitous connectivity,
- reliability, and
- seamless system integration.

RMIT Sep. 2005, Melbourne, Australia

UAH 4

Wireless technologies

- WLAN and WPAN technologies
- Bluetooth
 - Widespread, cell phones/PDAs
 - 720 kbps
 - Relatively high power consumption, protocol stack complexity
- ZigBee
 - Emerging standard
 - Very low power
 - 250 kbps
- UWB
 - High bandwidth
- Alternative solutions
 - MEMS resonators (100 μ W)

RMIT Sep. 2005, Melbourne, Australia

UAH 5

Ubiquitous Health Monitoring

RMIT Sep. 2005, Melbourne, Australia

UAH 6

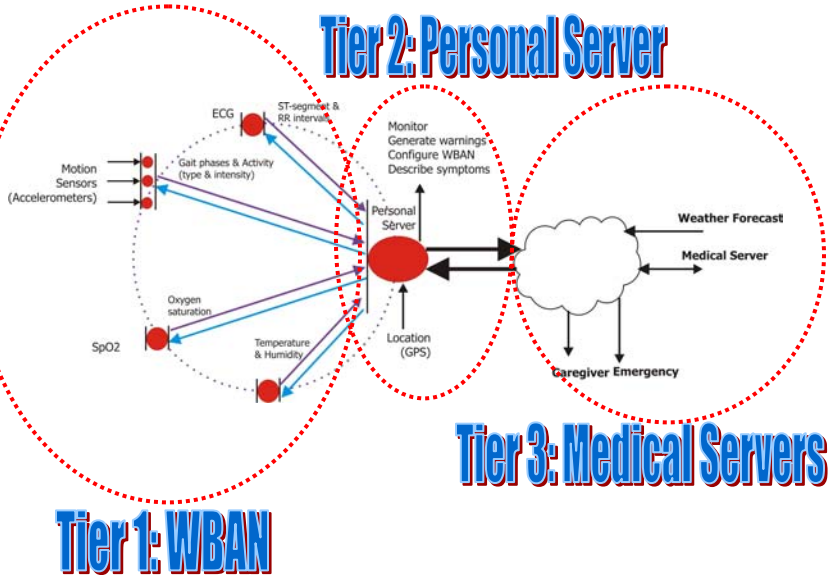

WBAN Configurations

RMIT Sep. 2005, Melbourne, Australia

UAH 7

3-tier Hierarchical Organization

RMIT Sep. 2005, Melbourne, Australia

UAH 8

Hierarchical organization

Tier	1. Sensor	2. Personal server	3. Medical server
Processing Power	1-10 MIPS	~ 100 MIPS	~ GIPS
RAM	1-10 KB	~ 50 MB	~ GB
Secondary memory	10-100 KB, 1 MB (flash)	~ 1 GB	~ TB
Power consumption	1-10mW proc. ~50mW comm.	~ 100 mW	~ 100 W
Other	Peripherals, timers, etc.	WAN communication	Internet connectivity

RMIT Sep. 2005, Melbourne, Australia

UAH 9

Wireless Body Area Networks at UAH

- 2000: Wireless Intelligent Sensors (WISE)

- 2002: Distributed Wireless System for Stress Monitoring

- 2004: ActiS - Activity Sensor
 - Standard sensor platforms and communication protocols

"A wireless body area network of intelligent motion sensors for computer assisted physical rehabilitation,"
 Journal of NeuroEngineering and Rehabilitation,

RMIT Sep. 2005, Melbourne, Australia

UAH 10

ActiS: Activity Sensor

RMIT Sep. 2005, Melbourne, Australia

ActiS: Activity Sensor

ActiS as Motion Sensor

RMIT Sep. 2005, Melbourne, Australia

Telos Wireless Platform

- 8MHz Texas Instruments 16-bit MSP430F1611 microcontroller
 - 10KB RAM, 48KB Flash
- Chipcon 2420, IEEE 802.15.4 compliant wireless transceiver
 - Hardware link layer encryption and authentication
 - 250kbps, 2.4GHz
 - programmable output power
- Onboard antenna
 - Range: 50 m / 125 m
- Integrated
 - humidity, temperature, and light sensors
 - ADC, DAC, DMA, Supply Voltage Supervisor
- TinyOS support

RMIT Sep. 2005, Melbourne, Australia

UAH 13

Intelligent Signal Processing Module ISPM

- 4MHz Texas Instruments 16-bit MSP430F1232 microcontroller (256B RAM, 8KB ROM)
- Multiple Dual Axis Analog Devices ADXL202 Accelerometers
- On-board bioamplifier (ECG, EMG) Texas Instruments INA321 Instrumentation Amp.
- Force resistor signal conditioning circuit
 - Foot switch

RMIT Sep. 2005, Melbourne, Australia

UAH 14

ZigBee network controller

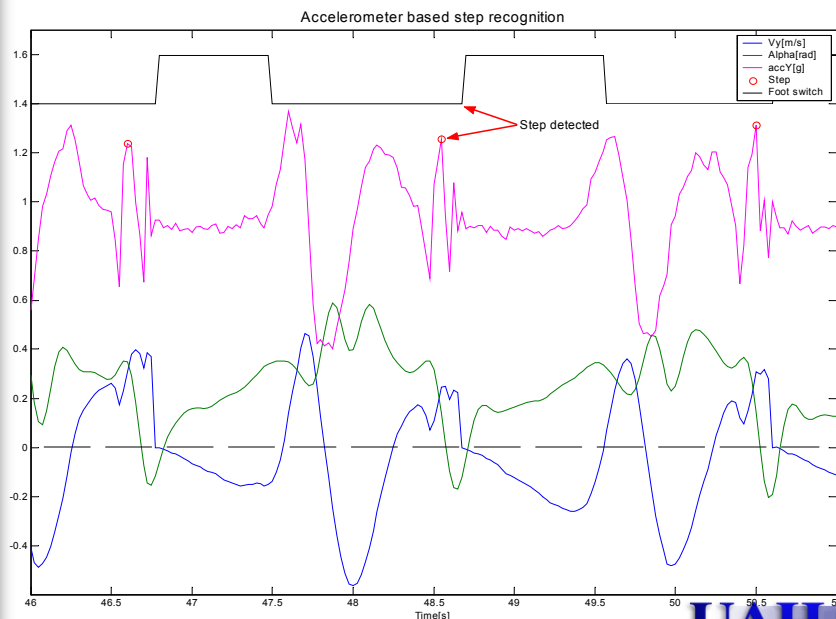

- Wireless gateway
- ARM7 processor
- ~60MIPS proc. power
- 64KB RAM
- Compact Flash interface
- ZigBee wireless interface

RMIT Sep. 2005, Melbourne, Australia

UAH 15

ActiS: Signal Processing

RMIT Sep. 2005, Melbourne, Australia

UAH 16

Actis System Performance

Tier	1. Signal Processing Module	2. Sensor Platform	3. Wireless Gateway	4. Personal Server
Processing Power	1 MIPS	1 MIPS	60 MIPS	~ 100 MIPS
RAM	256B	10 KB	64 KB	~ 64MB
Power consumption	1 mW	3mW	60 mW	~ 300 mW

RMIT Sep. 2005, Melbourne, Australia

UAH 17

System Design Issues

- Extremely low-power, low-weight, and small size
- Non-invasive and unobtrusive operation
- Reliable transmission using retransmissions
- Time-stamping for collective processing and out of order message processing
- Interoperability requires standardization
 - Seamless connectivity
 - Application specific standards for wireless communications, messaging, and system support
- Seamless customization, configuration, and integration
- Sensor placement and mounting
 - Sensor commodization
- Security and Privacy
 - Communication and data storage
- Effective user interfaces

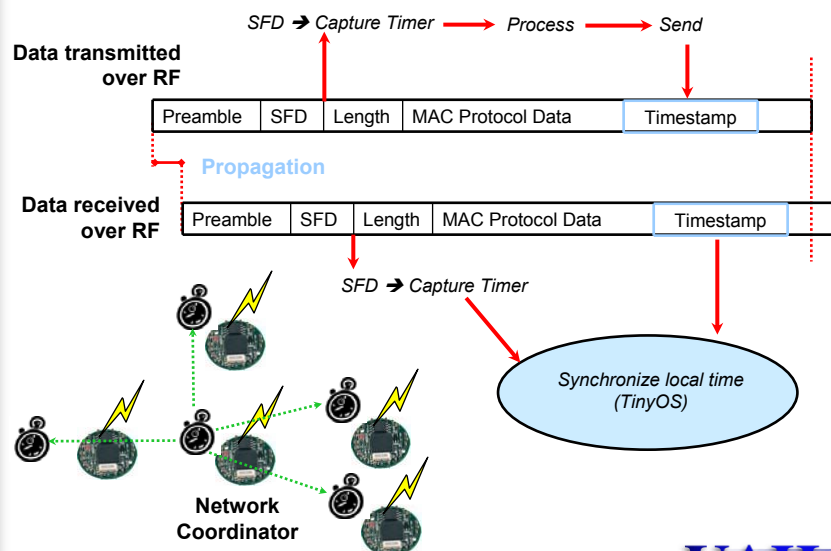

RMIT Sep. 2005, Melbourne, Australia

UAH 18

Time Synchronization

- Necessary for collective processing, data logging, power-efficient operation, etc.
- Problem:
 - High precision synchronization with low frequency clocks
 - 32 KHz on Telos
- FTSP Flooding Time synchronization protocols
 - Telos specific implementation at UAH
 - Implemented precision $\sim 2 \mu\text{S}$ with 32KHz crystal!

Mechanism for Time Synchronization

Power Consumption

- User's convenience
 - Battery life
 - Size and weight of batteries
- Battery Life
 - Battery Capacity [mAh]
 - $BL = BC / I_{ave}$
 - For simple time keeping and minimal processing average power is $\sim 2.1 \mu A$, standard 750 mAh batteries will allow battery life:
 - $BL = 750 \text{ mAh} / 2.1 \mu A \approx 44 \text{ years !!!}$
- Introducing: Apple Computers 

RMIT Sep. 2005, Melbourne, Australia

UAH 21

Power efficient communication

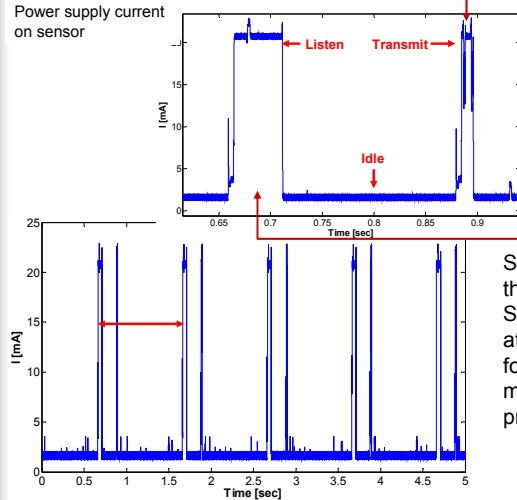

- Wireless communication requires ~ 10 times more power than processing
 - Turn-off radio whenever you can
- Time slots
 - Time slot scheduling
 - Allow time slots for new sensors to join the club
- Design issues:
 - Battery life
 - Latency
 - Number of sensors

RMIT Sep. 2005, Melbourne, Australia

UAH 22

Power efficient wireless communication - implementation

Power supply current on sensor

Super cycle time in this example is 1 sec. Sensors listens at the beginning of each cycle for 50ms, and transmits its own messages (2 in this example) in predefined time slot.

RMIT Sep. 2005, Melbourne, Australia

UAH 23

Personal Server program

- Implemented on PC/PDA
- Controls the network of wireless sensors
- Collects data from sensors
- Communicates with servers on higher levels of hierarchy whenever the connection is available
- Provides feedback and alerts to the user
- Stores user's inputs

RMIT Sep. 2005, Melbourne, Australia

UAH 24

ActiS Monitor - User's Info

The screenshot shows a window titled "ActiS Monitor" with a menu bar containing "File", "Options", "Connections", and "Help". Below the menu bar are tabs for "User Info", "Stats", "Sensor Commands", "Graphs", "Symptoms", and "Alerts". The "User Info" tab is active, displaying a form with the following fields and controls:

- Name: Text box containing "John Smith"
- Gender: Radio buttons for "Male" (selected) and "Female"
- Age: Text box containing "43"
- Height: Text box containing "6ft 3in"
- Weight: Text box containing "190 lb"
- Buttons: "OK" and "Clear"

RMIT Sep. 2005, Melbourne, Australia

UAH 25

ActiS Monitor - Network health and Statistics

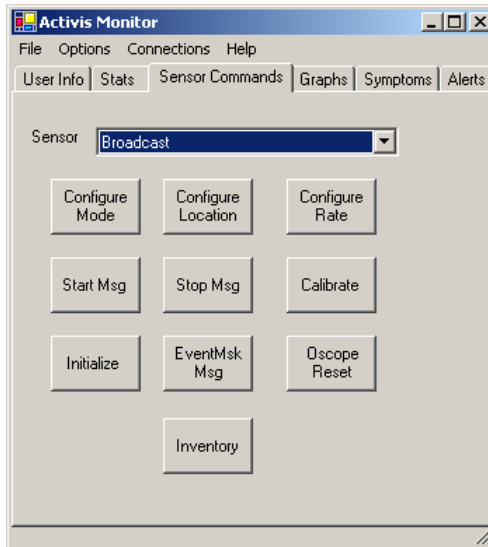

The screenshot shows a window titled "ActiS Monitor" with a menu bar containing "File", "Options", "Connections", and "Help". Below the menu bar are tabs for "User Info", "Stats", "Sensor Commands", "Graphs", "Symptoms", and "Alerts". The "Stats" tab is active, displaying a form with the following fields and controls:

- Text: "Which sensor's stats would you like to see?"
- Sensor: Dropdown menu showing "Sensor 4"
- Channel: Dropdown menu showing "ECG"
- Buttons: "New Session", "Clear All Lost Packets", and "Clear Lost Packets"
- Min: Text box containing "0"
- Max: Text box containing "0"
- StdDev: Text box containing "0"
- Avg: Text box containing "0"
- Total Good: Text box containing "510"
- Total Bad: Text box containing "0"
- Sensor Lost Pkts: Text box containing "0"

RMIT Sep. 2005, Melbourne, Australia

UAH 31

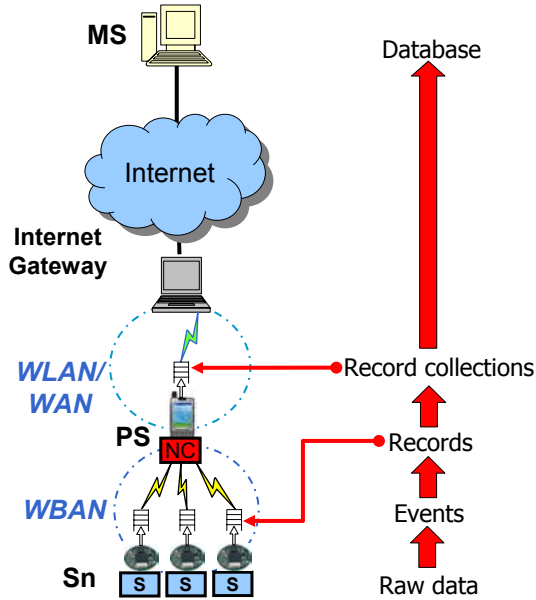

Software Organization

- ISPM Software
 - Physiological sensor interface
 - Preprocessing of signal data
 - Resource constrained, no operating system
- Telos Software
 - Developed in component framework of TinyOS
 - Significant signal processing
 - Defines Sampling Frequency
 - Server WBAN Communication

RMIT Sep. 2005, Melbourne, Australia

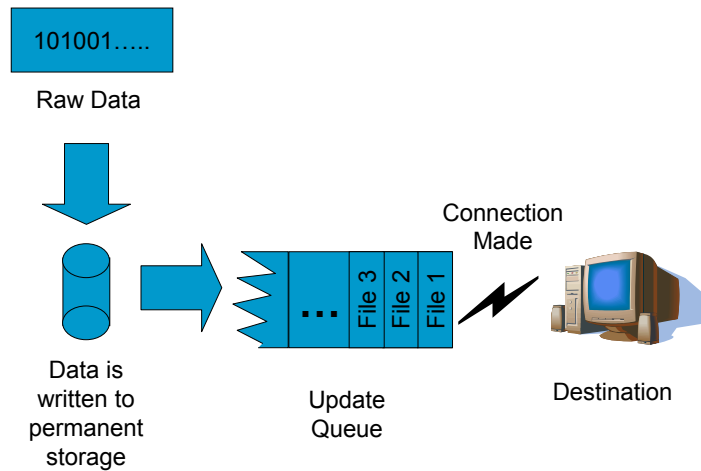

UAH 32

Wireless Integration

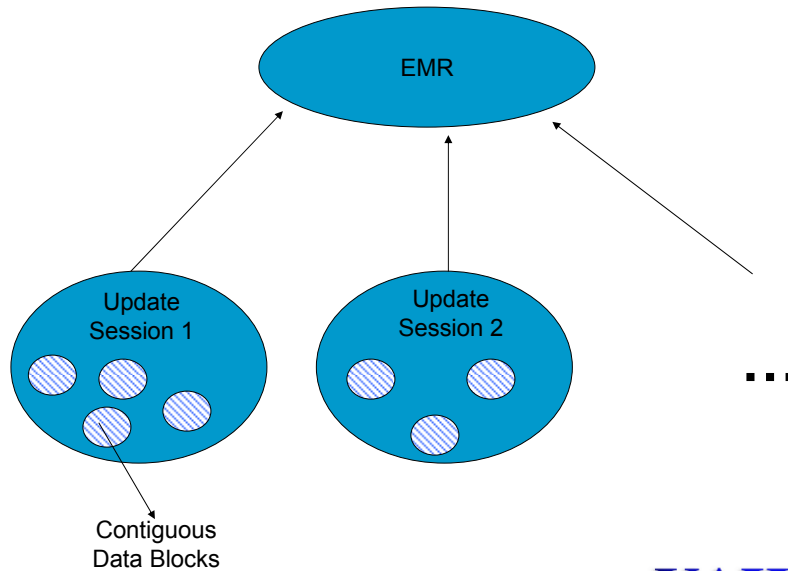

RMIT Sep. 2005, Melbourne, Australia

Record Update Mechanism

RMIT Sep. 2005, Melbourne, Australia

System organization - Sessions

RMIT Sep. 2005, Melbourne, Australia

UAH 35

Privacy and Security

- Hardware encryption of wireless communications
- Standard security mechanisms from the personal server to the upper levels of hierarchy
- EMBC05 paper: "Interoperability and Security in Wireless Body Area Network (WBAN) Infrastructures"

RMIT Sep. 2005, Melbourne, Australia

UAH 36

Conclusions

- Promising technology for
 - Ambulatory monitoring
 - Early detection of abnormal conditions
 - Supervised rehabilitation
- Advantages
 - Increased confidence and better quality of life
 - Promotes healthy lifestyle / health awareness
 - Data mining of huge research databases
 - Effects of drug therapies and rehabilitation procedures
- Need for standards for wireless communications, messaging, and system support

RMIT Sep. 2005, Melbourne, Australia
